Hi, I'm Anatolii

Ex-CTO at MTS Digital .
Built and scaled AI, biometric and e-commerce products from MVP to production.

Tech stack

FE — JS/TS, React, Next.js
BE — Node.js, Python
DB — Postgres, Redis, Kafka, ClickHouse
DevOps — k8s, Docker, Git, Prometheus/Grafana
AI/ML — PyTorch, TensorFlow, OpenCV, LLM/RAG, Mastra
SEC — WAF/OWASP, DAST, Crypto Gateways

Profile

Engineering Leader with 11+ years of experience in product development, architecture, and technical leadership. Former CTO at MTS Digital with hands-on experience building AI, biometric, and e-commerce products from MVP to production.

Designed a Secure Corporate LLM Platform, built the TOYS AI MVP, and led engineering improvements for a large-scale e-commerce platform.

Passionate about scalable architectures, measurable outcomes, and strong engineering culture.

Employment

CTO Biometrics Stream, MTS Digital

01/2021 – 02/2025 | 4 years

Products: Commercial Biometric System (CBS), KYC Verification Service and AI Recognition Platform, supporting biometric identification, remote onboarding and fraud prevention services for enterprise customers.

- Built the Commercial Biometric System (CBS) from scratch, delivering an MVP in 4 months and launching it into production with the first enterprise client.
- Managed engineering organization through 3 Team Leads, driving hiring, performance management and team scaling across 35+ engineers.
- Combined products into an ecosystem — reduced costs by 30%, reduced integrations from 2 weeks to 5 days, increased roadmap consistency.
- Owned engineering planning and roadmap execution across multiple product teams, including quarterly prioritization, delivery commitments and resource allocation.
- Built shared DevOps & Support — uptime 97.5% -> 99.95%.
- Designed and evolved fully distributed, highly available architectures for business-critical systems supporting 1000+ RPS and 99.99% SLA.

Tech Lead, Nevada group

01/2026 – 06/2026 | Russia

Transformation-focused role aimed at improving engineering processes, platform reliability and delivery performance.

Samberi (e-com) — retail platform supporting 300+ stores, with multiple integrations, legacy systems and high availability requirements.

- Led engineering transformation across a 12+ engineer organization, managing internal teams and external vendors.

Education — Higher

Bauman Moscow State
Technical University,
Information processing and
management systems 
09/2015 – 08/2019
Moscow, Russia

Skills

Leadership	
Delivery	
Architecture	
Product development	
English - B2	

- Established engineering quality practices, including code review, automated testing and release management, increasing release frequency from weekly to 2–3 deployments per week.
- Implemented observability standards across the platform, including monitoring, alerting, logging and incident diagnostics, reducing production incidents by ~80%.
- Led architectural modernization initiatives focused on technical debt reduction, platform scalability and long-term maintainability.

Architect, MetaLamp | Part-Time Consulting 
02/2025 – 04/2025

Short-term consulting engagement focused on architecture design and implementation planning.

Secure Corporate LLM Platform — enterprise AI platform designed to enable secure LLM adoption while enforcing organizational AI risk policies.

- Designed system architecture and key components using the C4 model. (Github )
- Defined on-premise deployment architecture and infrastructure requirements.
- Evaluated security controls, guardrails and integration architecture for enterprise environments.
- Selected core technologies, including LLM, RAG and security components.
- Prepared implementation roadmap and delivery guidelines for engineering teams.

Tech Lead, Unimatch Lab
05/2025 – 01/2026

Founding-stage engagement focused on product launch, architecture and initial team building.

TOYS AI — venture-backed AI product combining conversational AI, agent-based workflows and connected hardware.

- Built the product from concept to first working MVP in 2 weeks as the sole engineer, delivering a functional prototype for investor and customer demonstrations.
- Developed core product capabilities, including AI-powered toy interaction, child profile management and safety policy enforcement.
- Redesigned the initial solution around AI models and an agent-based architecture to support future product evolution.
- Defined scalable platform architecture and engineering foundations with a focus on extensibility and future team growth.
- Recruited and onboarded the first backend engineers, helping establish the initial engineering team.
- Designed hardware&software requirements, device architecture and operational usage scenarios.
